SUMMARY

BCA student and entry-level cloud candidate with hands-on AWS, Linux, and networking experience built through practical projects and labs. Built and validated AWS infrastructure (VPC, EC2, RDS, ALB, IAM, SSM) with Terraform and deployed containerized workloads on Kubernetes. Comfortable diagnosing connectivity, permission, and service issues with a systematic, command-line approach. Immediate joiner, willing to relocate.

SKILLS

Cloud (AWS): EC2, S3, IAM, VPC, Subnets, Route Tables, Internet & NAT Gateways, Security Groups, Application Load Balancer, RDS (MySQL), Systems Manager (SSM), CloudWatch, ECR, EKS, AWS CLI
Linux and Networking: Linux Administration, systemd Services, Nginx, Log Analysis, Root Cause Analysis, TCP/IP, Subnetting, DNS, DHCP, Routing & Switching, Network Troubleshooting, CCNA Fundamentals
DevOps and IaC: Terraform (modules, remote state, multi-environment), Docker, Kubernetes, Kind, Helm, Jenkins, Argo CD, CI/CD, Git, GitHub
Security: IAM Policies & Roles, Least-Privilege Access, Security Group Rules, Trivy Image Scanning, Secrets & State Hygiene, Authentication & Permission Troubleshooting
Scripting and Web: Python, Bash, SQL (Basic), JavaScript, FastAPI, Flask, REST APIs, React.js, HTML, CSS

PROJECTS

Three-Tier AWS Infrastructure with Terraform
Technologies: AWS, Terraform, VPC, EC2, RDS, ALB, IAM, SSM | GitHub: github.com/jupiterian23/three-tier-aws-terraform
- Provisioned a three-tier AWS architecture entirely with Terraform across two Availability Zones: an Application Load Balancer in public subnets, EC2 app servers in private subnets, and a private RDS MySQL database.
- Designed VPC networking with public/private subnets, route tables, Internet Gateway, and NAT Gateway, plus tier-based Security Groups allowing only ALB-to-EC2 (HTTP 80) and EC2-to-RDS (MySQL 3306) traffic.
- Attached IAM roles, accessed private EC2 via AWS Systems Manager (no public SSH), and validated traffic from the internet through the ALB to the app tier and on to RDS.

AWS Cloud Infrastructure & Troubleshooting Lab
Technologies: AWS, EC2, S3, IAM, VPC, Linux, Nginx, AWS CLI
- Launched an EC2 Linux instance, enabled Nginx as a system service, opened SSH/HTTP access through Security Group rules, and traced the root cause of public web-access failures across security rules, routing, and service state.
- Created S3 buckets, IAM users, and policies with the AWS CLI; diagnosed AccessDenied and credential errors by isolating IAM policy, bucket permission, and CLI configuration issues.

End-to-End AWS Cloud DevSecOps Project
Technologies: Python, FastAPI, Docker, Kubernetes (Kind), Trivy | GitHub:
github.com/jupiterian23/End-to-End-AWS-Cloud-DevSecOps-Project
- Built a FastAPI Cloud Operations API with status, health, and info endpoints, and containerized it with Docker including a container health check.
- Deployed to a Kind Kubernetes cluster with a dedicated namespace, 2 replicas, readiness/liveness probes, and CPU/memory requests and limits; exposed it via a NodePort Service and verified traffic reached both replicas.
- Scanned the image with Trivy and kept credentials, Terraform state, and kubeconfig out of Git. Terraform, CI/CD, monitoring, and AWS deployment are in progress.

End-to-End Kubernetes Three-Tier DevSecOps Project
Technologies: AWS EKS, ECR, Kubernetes, Docker, Terraform, Jenkins, Argo CD | GitHub:
github.com/jupiterian23/End-to-End-Kubernetes-Three-Tier-DevSecOps-Project
- Customized an existing three-tier DevSecOps project (React, Node.js, MongoDB) for a personal AWS environment; defined Kubernetes Deployments, Services, Ingress, Secrets, persistent storage, health probes, replicas, and rolling-update strategies.
- Integrated Amazon ECR, moved Terraform state to an S3 remote backend, and customized the Jenkins CI/CD pipeline.

Multi-Environment AWS Infrastructure with Terraform
Technologies: Terraform, AWS EC2, VPC, Security Groups | GitHub: github.com/jupiterian23/multi-environment-terraform
- Built a reusable Terraform EC2 module consumed by separate DEV and PROD root configurations, each with its own variables, outputs, and isolated state.
- Ran the full init, plan, apply, and destroy lifecycle for both environments, using AWS data sources to reference existing networking and applying consistent resource tags.

EXPERIENCE

Frontend Developer Intern | Annotation Infotech LLP | 2024 – 2026
- Developed responsive components with HTML, CSS, JavaScript, and React.js, and integrated REST APIs into backend-connected workflows.
- Debugged application issues and performed functional testing with the development team through feature development and deployment.

Data Management & Office Administration | Aegis Logistics Limited | 2023
- Maintained attendance records, purchase orders, and operational documentation, and prepared structured Excel reports.

EDUCATION

Bachelor of Computer Applications (BCA)
Amity University Online | Expected Graduation: 2027 | CGPA: 8.40/10 (5th semester)

CERTIFICATIONS

- **Cloud Computing with AWS** | Internshala Trainings | 09/2026 | Scored 97%, top performer (Cert. 9g9w4ozjbor)
- **Cisco Certified Network Associate (CCNA)** | Cisco | In Progress
