SUMMARY

BCA student (graduating 2027) seeking an entry-level AWS Cloud Support Engineer role, with 5 hands-on AWS, Linux, and networking projects on GitHub. Provisioned and validated AWS infrastructure (VPC, EC2, RDS, ALB, IAM, SSM) with Terraform and diagnosed Security Group, routing, IAM AccessDenied, and Linux service issues using the AWS CLI and Linux command line. Applies least-privilege access and secure credential handling. Immediate joiner, willing to relocate.

TECHNICAL SKILLS

AWS Cloud: EC2, S3, IAM, VPC, Public/Private Subnets, Route Tables, Internet & NAT Gateways, Security Groups, Application Load Balancer, RDS (MySQL), Systems Manager (SSM), CloudWatch, ECR, EKS, AWS CLI
Troubleshooting: Network Connectivity (Security Groups, Route Tables, Subnets, Gateways), IAM AccessDenied & Credential Errors, Linux Service Failures, Root Cause Analysis
Linux Administration: Linux Command Line, systemd Services, Nginx, Service Management, Log Analysis
Networking: TCP/IP, Subnetting & CIDR, DNS, DHCP, Routing & Switching, HTTP/HTTPS, Ports & Protocols
Infrastructure as Code: Terraform (modules, variables, outputs, remote state, multi-environment)
Containers & DevOps: Docker, Kubernetes, Kind, Helm, Jenkins, Argo CD, CI/CD, Git, GitHub
Cloud Security: IAM Policies & Roles, Least-Privilege Access, Security Group Rules, Secure Credential Handling, Trivy Image Scanning
Scripting & Web: Bash, Python, FastAPI, Flask, REST APIs, SQL (Basic), JavaScript, React.js, HTML, CSS

PROJECTS

Three-Tier AWS Infrastructure with Terraform
Technologies: AWS, Terraform, VPC, EC2, ALB, RDS, IAM, SSM | GitHub: github.com/jupiterian23/three-tier-aws-terraform
- Provisioned a 3-tier architecture across 2 Availability Zones entirely with Terraform: an Application Load Balancer in public subnets, EC2 app servers in private subnets, and a private RDS MySQL database.
- Designed VPC networking (public/private subnets, route tables, Internet and NAT Gateways) with tier-based Security Groups allowing only ALB-to-EC2 (HTTP 80) and EC2-to-RDS (MySQL 3306) traffic.
- Secured access to private EC2 through IAM roles and AWS Systems Manager with no public SSH, and validated end-to-end traffic from the internet through the ALB to the app tier and RDS.

AWS Cloud Infrastructure & Troubleshooting Lab
Technologies: AWS, EC2, S3, IAM, VPC, Linux, Nginx, AWS CLI
- Launched an EC2 Linux instance running Nginx as a systemd service; diagnosed public web-access failures by checking Security Group rules, route tables, and service status from the command line.
- Created S3 buckets, IAM users, and policies with the AWS CLI; resolved AccessDenied and authentication errors by isolating IAM policy, bucket permission, and CLI credential configuration issues.

Cloud Operations API with Docker & Kubernetes
Technologies: Python, FastAPI, Docker, Kubernetes (Kind), Trivy | GitHub: github.com/jupiterian23/End-to-End-AWS-Cloud-DevSecOps-Project
- Developed a FastAPI service with 3 endpoints (status, health, info) and containerized it with Docker, including a health check.
- Deployed to a local Kind cluster in a dedicated namespace with 2 replicas, readiness/liveness probes, and CPU/memory requests and limits; exposed it via a NodePort Service and verified traffic reached both replicas.
- Scanned the image with Trivy and kept secrets, state, and kubeconfig out of Git. AWS deployment and CI/CD are in progress.

Kubernetes Three-Tier DevSecOps Project on AWS EKS
Technologies: AWS EKS, ECR, Kubernetes, Docker, Terraform, Jenkins, Argo CD | GitHub: github.com/jupiterian23/End-to-End-Kubernetes-Three-Tier-DevSecOps-Project
- Adapted an existing three-tier project (React, Node.js, MongoDB) for a personal AWS environment, defining Deployments, Services, Ingress, Secrets, persistent storage, probes, and rolling updates.
- Integrated Amazon ECR, moved Terraform state to an S3 remote backend, and customized the Jenkins CI/CD pipeline.

Multi-Environment AWS Infrastructure with Terraform
Technologies: Terraform, AWS EC2, VPC, Security Groups | GitHub: github.com/jupiterian23/multi-environment-terraform
- Wrote a reusable Terraform EC2 module shared by 2 environments (DEV and PROD), each with its own variables, outputs, and isolated state.
- Executed the full init, plan, apply, and destroy lifecycle in both environments, using AWS data sources for existing networking.

EXPERIENCE

Frontend Developer Intern | Annotation Infotech LLP | 2024 – 2026
- Built responsive UI components with HTML, CSS, JavaScript, and React.js, and integrated REST APIs into backend-connected workflows.
- Debugged application issues and performed functional testing alongside the development team, from feature development through deployment.

Data Management & Office Administration | Aegis Logistics Limited | 2023
- Maintained attendance records, purchase orders, and operational documentation, and prepared structured Excel reports.

EDUCATION

Bachelor of Computer Applications (BCA) | Amity University Online | Expected Graduation: 2027 | CGPA: 8.40/10 (Sem 5)

CERTIFICATIONS & TRAINING

- **AWS Cloud Quest: Cloud Practitioner – Training Badge** | Amazon Web Services | 10/2026 | Verified on Credly
- **Cloud Computing with AWS** | Internshala Trainings | 09/2026 | Scored 97%, top performer (Cert. 9g9w4ozjbor)
- **Cisco Certified Network Associate (CCNA)** | Cisco | In Progress
